```

Se abre Xampp y se inicializan servicios

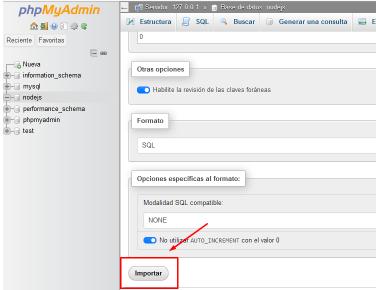

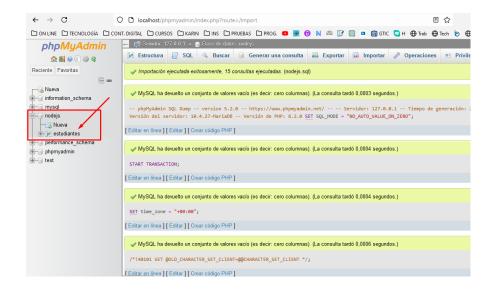

Se crea la base de datos en php my Admin y se importa la tabla estudiantes

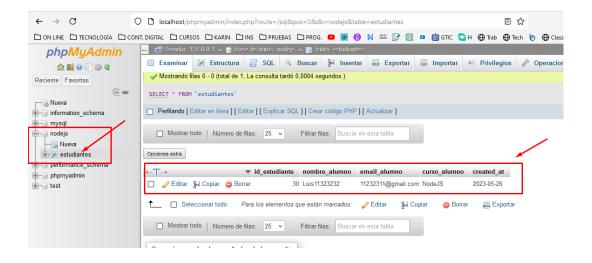

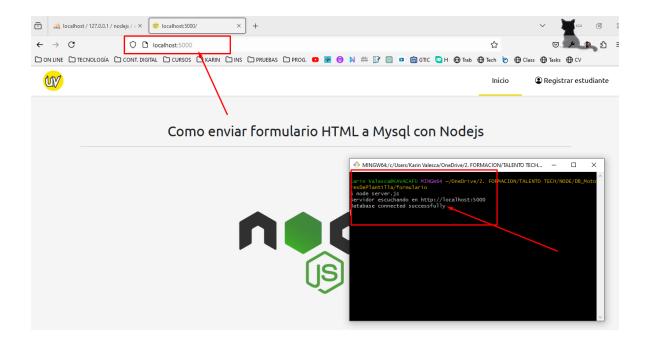

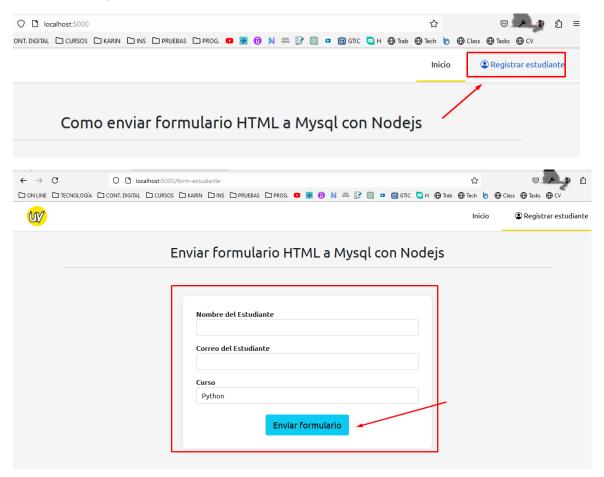

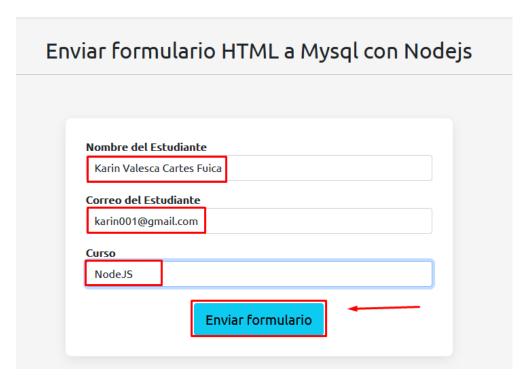

Se configura servidor en puerto 5000

## Se realiza el registro del formulario con mis datos y se envía a la tabla estudiantes

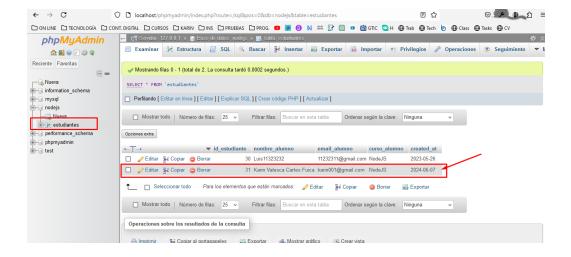

Se valida inserción de base de datos

```
MINGW64:/c/Users/Karin Valesca/OneDrive/2. FORMACION/TALENTO TECH.... — X

Karin Valesca@KAVACAFU MINGW64 ~/OneDrive/2. FORMACION/TALENTO TECH/NODE/DB_Moto
resDePlantilla/formulario
node server.js
Servidor escuchando en http://localhost:5000
Database connected successfully
[Object: null prototype] {
    nombre_alumno: 'Karin Valesca Cartes Fuica',
    email_alumno: 'karin001@gmail.com',
    curso_alumno: 'NodeJS'
}
```

Acá se configuró tal cual con el puerto 3307, sin password

```
const mysql = require("mysql2");
const connection = mysql.createConnection({
  host: "localhost", // MYSQL HOST NAME
  user: "root", // MYSQL USERNAME
  password: "", // MYSQL PASSWORD
  database: "nodejs", // MYSQL DB NAME
  port: 3307,
});
```

La dificultad fue correr el server.js, pero revisando documentación y chat gpt pude solucionar.

Me hacía falta instalar una dependencia que era el cors

Y lo otro problema era que no estaba en el directorio correcto así que abrí el gitbash desde la carpeta formulario que era donde estaba el server.js y el configDB.js. Solo así pude inicializar el server y visualizar la página para enviar correctamente los datos en el formulario

```
